JaMP Organizer - JaMP Organizer 0.8.8.0 JaMP Organizer is a freeware application designed to help you take control over your music library, by providing you with a wide array of renaming options, as well as a fully-featured tag editor to modify the ID3, APE and WMA tag information. Furthermore, it is also capable to replace terms and repair broken tag data for a wide variety of file formats. One of the most important features built into the application is its ability to rename the desired documents in batch, by entering the new parameters for each of the loaded items. Alternatively, these names can be generated automatically by the utility, using your own values and data taken from the ID3 tags. Replace tags using the tag editor Beside the bulk renaming capabilities, a tag editor is included as well, which can be used to modify the artist, title and album information for tracks that support ID3 tags. As you might expect, these values can be manually changed with the desired data, or automatically processed by the program to save time. In case you are looking for a specific item among within the tags, you can make use of the search function, which also offers you the possibility to include special delimiters to differentiate between words. Additionally, the replace function can be used to change values throughout all of the loaded documents and you can choose to include wildcards as well. A quick and reliable tag editor In the end, JaMP Organizer is a very handy utility to have around on your computer, especially if your music collection requires constant attention when it comes to tag information. Moreover, the simple user interface allows you to quickly navigate

What's New in the JaMP Organizer?

JaMP Organizer has many different features, however the one that I like the most is its ability to detect duplicate files. After some trial and error with my CD collection, I found the perfect program to identify duplicates. JaMP Organizer found all my CDs for me and even told me what the "right" CD was for me. JaMP Organizer also knows which CD should go with which album. And of course you can manually move those duplicates from one album to another. JaMP Organizer works well with music, photos, and video. It has lots of options to customize and make the program more like the way you want it. I use the "Remove all songs from Genre" to clean up my CDs.
