were 2 or 2,000 chambers. And this included the business houses, not only the ordinary houses. He had been at the practise of architecture for many years and had already designed many beautiful houses. He had a great regard for some other architects, and always praised the successful architects a lot. All the other architects respected him a lot, and all the customers knew him very well. They were all trustful of him. He once lost a lot of money in a speculation and was almost bankrupt. He was really desperate and almost ready to give up architecture. But he knew that what he wanted in life was an

architecture which was indispensable and which was appreciated by the people. And at that time the development of architecture had reached the greatest peak. The buildings then were very extraordinary and marvelous. He had paid great attention to architecture, and had turned into a great architect. One day he was in the office of his employer. He had a job to measure the rooms of a house. The interior architect was to do some detailing before the developer had started working on the construction work. For this he had taken the measurements very carefully with a great accuracy.

Then the interior architect said, "There are a lot of rooms in this house. Please take some time to look around the house and draw as many general plans as you can as fast as possible." "OK," said the employer. "This man is really quite insistent that he wants every room to be designed by him. So I'll have to do what he asks, even though I'm not satisfied about it." The interior architect was feeling a little angry at this reaction. He was almost ready to resign his position.

He said to himself, "He is not

Colormancer is a Photoshop plugin that lets you tweak contrast, brightness, and saturation to bring out depth and dimensionality in your images. Colormancer will literally change and enhance the appearance of the photos you edit. Colormancer is designed to avoid the color shifts of existing tools. When adjusting brightness and contrast, Colormancer keeps hue and saturation constant by maintaining a constant ratio between the red, green, and blue values of each pixel. Unlike using a Curves adjustment on RGB values,

Colormancer avoids the decreased saturation in highlights. It also avoids the hue and saturation shifts in the other tonal ranges.

Here are some key features of "Colormancer":

- All internal calculations performed with 32-bit floating point precision
- Supports 8-bit, 16-bit, and 32-bit RGB and Grayscale modes
- Smart filter enabled

Requirements: □ Adobe PhotoShop CS3 □ Photoshop Elements 2 or higher

Limitations: □ Watermark on the output

Colormancer will enhance, brighten and increase the depth of colour in your image. If there is any imbalance in your image the colours will shift up or down. The results will vary from image to image and from photo shoot to photo shoot. The plugin is able to accurately enhance the tonal range of both the highlights and shadows of an image. Colormancer is available in three versions: For Premium users only. Have more than 20 pics in my portfolio! I consider myself a Photoshop pro with many post-processing skills. Thanks! For the past couple of days I have been working on a

plugin that I think will be a really useful addition to your toolkit. I am calling it the Lights tool. The Lights tool allows you to paint shadows and highlight areas by adjusting the light in an image. By using the slider you control how much light is in the shadows or how dark the highlights are. By controlling the amount of light you can find that spot in your image that is looking a bit flat or cold and warm up that area. When you get it all looking good (smooth for instance) you can save the image. The Lights tool is very easy to use. You have three settings: Light, Detail and Blur. You have a variety of effects you can make with the tool, such

as a spotlight effect. You can do the effect at the same time you apply a Curves effect for extra control. The Lights tool is a free plugin, but you can get a fully-fledged version if you like, just send me an email.
