Earlier this year, conservative commentator Ann Coulter bashed the government shutdown by demeaning the Americans who were affected. "Dickheads," she said, "having no problems walking into Disney World without a security pass." Coulter, a guest on "Saturday Night Live's" Weekend Update, made these remarks a month before the government shutdown that began at midnight Oct. 1. Last Friday, Coulter once again made the case that President Barack Obama and the Democrats were the perpetrators of government shutdown, blaming people who hold "phony" liberal positions on Capitol Hill for the shutdown. "The last time we had a shutdown was President Obama," Coulter said on "The Real" on Oct. 22, according to Right Wing Watch. "The last time we had a shutdown was, like most of you, I was a citizen. We went down to our government to get a job, I went down to get a job, the job was gone." The comment that went viral, however, came when Coulter said for the first time her argument "that the Democrats are the party responsible for the shutdown" triggered "liberal rage." "There was such a fury that people commented, 'I think that Ann is responsible for this. I think she's taking money out of my pocket so that I'm going to have to pay her back for the giveaway.' Because the one and only reason you're not getting your COBRA subsidy is because Ann Coulter closed the office," she

Q: Is there any way to use new StreamReader to retrieve a line from a txt file before it is opened I'm just wondering if there is any way to use the new StreamReader to retrieve a line from a txt file before it is opened. For example, I'm already looping through a textfile and reading each line of a text. When I loop through the file again, I would like to retrieve a single line but only when I'm at the end of the file so I can do something with it. I know this works to go through the file line by line, but not when the file already has been loaded. `public static string ReadLine() { using (var reader = new StreamReader(@"C:\Users\Name\Desktop\txtfile.txt")) { return reader.ReadLine(); } }` My question is: Is there any way to get the line that I'm after from the txt file before it is open? Or any other ideas?

A: There are several ways to do that, but they're all a bit overkill. It sounds like what you want is a way to detect the end of the file, but there's no method on StreamReader to do that directly. However, there's a method that does the same thing. This is effectively a shorthand for calling `EndRead`. `public static string ReadLine() { using (var reader = new StreamReader(@"C:\Users\Name\Desktop\txtfile.txt")) { return reader.ReadLine(); } }` The only problem with this approach is that it can throw an exception if the file doesn't end. You can handle that by putting the using inside of a try/catch. Alternatively, you can handle the exception. You might not be able to do what you want in the case of the specific exception, but it's better to be safe than sorry. `try { using (var reader = new StreamReader(@"C:\Users\Name\Desktop\txtfile.txt")) { return reader.ReadLine(); } } catch (IO`

1. Field of the Invention The present invention relates to an optical amplifier switch and an optical amplification device and, more particularly, to an optical amplifier switch, which amplifies a basic wavelength band and, in a pair of input ports, inserts an optical switch into a transmission path on the upstream and the downstream side so as to switch input and output signals, and the output side can be connected for monitoring or the like, and an optical amplification device using the optical amplifier switch. 2. Description of the Related Art An optical amplifier is used to amplify a light signal before it is input into an optical transmission line, so as to attain a gain due to distance-dependent propagation loss or transversal mode conversion loss. For example, an optical amplifier in which an erbium-doped fiber amplifier (EDFA) is used on the downstream side includes an optical switch. As the switching function of the optical amplifier switch is controlled, independently for the upstream signal and the downstream signal, the optical amplifier switching loss can be reduced. In the EDFA, a gain from the amplification of a fundamental band is wavelength-dependent and, especially, the optical amplification of a 1.55 μm band is high in comparison with that of other wavelength bands. It is also possible to make effective use of the optical amplification characteristics of the EDFA by, for example, connecting the EDFA to a wavelength-selective optical attenuator, a wavelength-selective optical amplifying apparatus or an optical filter on the downstream side. However, characteristics of an optical amplifier can differ between the upstream and the downstream side. In order to equalize them or thereby to increase the capacity of the entire system, the optical amplifier is connected with a switching circuit, so
