

It comes with hre metal insert, and it is compatible with all imperial armour 1:r, 1:h, 1:n, 2:r, 2:h, 2:n cannons. IMPERIAL ARMOR 2:n is a great upgrade for all imperial armour 1:r cannons. EPUB Imperial Armour Volume Three The Taros Campaign Second Edition Warhammer 40k Expansion Free Books.PDF. You can download and read online. One of the best Imperial Armour Expansion products in the market, Imperial Armour Apocalypse - Second Edition. This is the "Bolt-on" expansion for Imperial Armour Volume Three Second Edition The Taros Campaign. Preliminary Study of Binding Energy Between Cd²⁺ and Complexing Agents and Mechanism of Adsorption. The adsorption characteristics and mechanism of Cd²⁺ with organic ligand complexes (Alip, Aliquat, EPPS, EDTA, and CSC) were investigated in this paper. The equilibrium adsorption data and adsorption isotherms were obtained with the aid of a static equilibrium system. The results show that: (1) Cd²⁺ adsorption isotherms fit the Langmuir model better and the maximum sorption capacities were obtained with the order of CSC > EDTA > EPPS > Aliquat > Alip. (2) The adsorption temperatures of CSC, EDTA, and EPPS were obtained with the order of 303 EPPS > EDTA > Alip. The result indicates that there are similarities in adsorption properties for different ligands. However, the differences between Alip and the other ligands is obvious and this tendency is more significant for the adsorption capacity when the pH value decreases. Therefore, the adsorption mechanism between Cd²⁺ and the four kinds of organic ligand complexes was investigated by means of the distribution diagram of the binding energy and the thermodynamics. The result of the curve fitting between adsorption and chemical adsorption indicates that the adsorption mechanism of Cd²⁺ with organic ligand complexes is
