Chapter 1 Learn Binary and Hexadecimal Numbers: Your value is a number and a value has a range. This value is represented in Hexadecimal and binary form, also known as hex and bin. Binary is the base-two representation of values, where 1 equals half, and 0 equals no-value. Binary numbers can be positive or negative. Hexadecimal or base-16 is the representation of values that is not

inherently positive or negative. The binary representation of a value is made by converting values from binary to hexadecimal. To convert a Binary value to Hexadecimal, shift the value by 4 and add 0x30 to the result. The following is a sample of an input and output showing Binary and Hexadecimal: Input: 100 Output: 50 Hexadecimal: 33

Binary: 11

Chapter 2 Learn Basic String Concepts:

A String is a series of characters. Strings are the digital representations of characters stored as data. Each character is considered to be a unit of information. In Computer Science, a string is simply a string of characters, unlike a linked list, a string is only a single series of data in memory. Think of a String as a sequence of characters, such as a sentence. Strings are held in memory to store information. The

most common form of a string in a computer system is a string of characters. String objects are stored in memory as a contiguous block of characters. A single string has two parts, the length of a string and the data that the string holds. The data that a string holds is the characters between the left and right side of the string. This data can be of any type, like ASCII text data or a digit. Strings are used to represent other data types for the purpose of easy access. When a string object is instantiated, you specify the data type and the length of the string. All the characters in a string are the same type, all the characters are stored contiguously in memory and the string has a variable length. Strings are used to store data that cannot be stored elsewhere. When you type a string, the length of the string

increases by 1

What's new in Making History: The Calm Amp; The Storm:

Beneath the Final Sun, the Darkness cracks, fissures spreading as a growing eternal night seeps into the land of Hradcany. The last of the Nūmah survivors flee as the Legion draws nearer... Humans and orcs, halflings and mice, gryphons and leprachauns and all manner of sages and utopia-seeking revolutionary heroes, loremasters and leper-poets, they all flee and battle the shadows, and all that remains are two fragile cities and a young man, lost to time and finding the end of the world upon his bloody sword. Out There Beyond the Shimmering Wall The forces of evil fall upon the world. Conspiracy and destruction are revealed to be within and all around, and the world burns. Knights and sorcerers of all kinds seek to protect their home and its surviving followers. As humanity's assaults continue, now under cover of night, a new race of creatures appears. Beastmen, half-orc, trolls, borogoves, fire giants, pixie-birds. Powerful bastions of the dark are discovered and torn down. New conspiracies uncovered, new heroes born. Day dawns but dark deeds wake in the night, and the horror continues. Gothic Adventures: King in the North They called it the Great Northern Wastes because no one really knew where it started or exactly what lay beyond it. Its name, they knew, conjured more fears than its reality could ever hope to provoke. It filled more maps than most men could understand. It went on for eternity. There were those who whispered it didn't exist at all, though everyone knew that those who said it was nothing more than a tale told to frighten children were only using the nation's wartime dread to hamper the strength

and initiative of the nation whose soldiers might someday march into this unknown on the day the war ended. Still, the images and rumors didn't vanish in the minds of the men and women who'd grown up with tales of the great place—they could still be found decades after the war. The Great Northern Wastes got plowed under. It got farmed, mined, staked for minerals. Anything to be had got taken. And what wasn't? Anything that could be forged into armor got smashed to bits and sold as scrap steel, whatever couldn't be used on wagons and tractors got used on

hemodynamics are altered after truncal vagotomy for peptic ulcer disease, but their mechanisms are unknown. Accordingly, we have used an

arteriovenous extracorporeal human circuit in 20 healthy control subjects and 20 patients whose ulcers had been treated by selective truncal

vagotomy to determine whether vagotomy causes splanchnic hypoperfusion after cold provocation.

Nine of the 20 patients had a 2-fold or greater

decrease in the percent change in plasma flow to the liver and gastrointestinal tract after cold provocation; the remaining 11 patients had values that were not significantly different from the control group. We conclude that vagotomy does not by itself cause splanchnic hypoperfusion after cold provocation, despite a marked decrease in intramucosal pH in the stomach; instead, vagotomy interferes with the compensatory vasoconstrictor response of
