Implementing a minimalistic login screen
(robust security-wise) I'm trying to implement
a very simple login screen as an exercise for
my programmer knowledge. I would like this
login screen to be as minimalistic as possible,
and also secure. I know the library what I'm
gonna use is either SQLite or Firebase. If
someone could explain or refer me to some
material on login screens (I've read a lot on
this topic), I'll be grateful. If it's really
important I'll look at the material myself, but
I'd prefer something short. The screen
contains only 1 "button" and 1 "label", and a
login/password text field. If the login/password
text field is entered with an incorrect
password, a "Login failed" text is shown. This
text should not be shown again as long as the

password field is not changed. If the
